

Aspect100R Lateral Roll

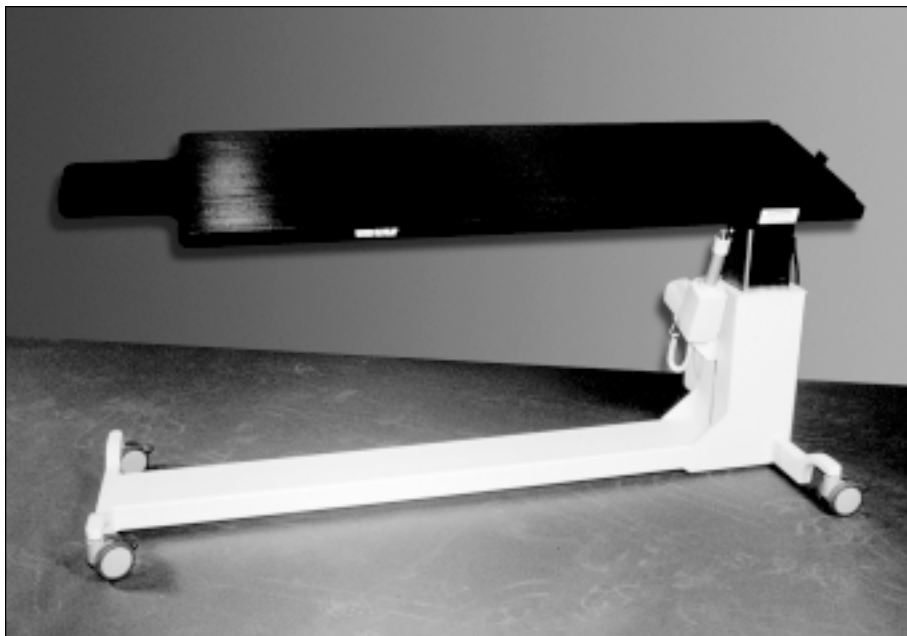

PRODUCT DATA

Features:

- 62" unobstructed tabletop viewing
- Motorized lateral roll: $\pm 20^\circ$
- Adjustable height: 28.7" to 40.5"
- Capacity: 450#
- Neck cut-away, standard tabletop configuration
- Table weight: ~325#
- Low attenuation carbon fiber tabletop
- 120-VAC motorized elevation with hand control
- Locking swivel casters
- Table pad and restraint straps

Accessories:

- Armboards and patient restraints
- Tableside radiation shields
- Custom tabletop configurations

Aspect100R Fluoroscopic Examining Table

Image Diagnostics' *Aspect100R* is specifically designed for ease of use and high quality image outcome. *Aspect* tables benefit from a trim, lightweight design, ensuring a single operator can position the table with ease. Features unique to the *Aspect* table series provide the ultimate in table maneuverability, operator access, and patient comfort. The Image Diagnostics *Aspect100R* is designed to facilitate vascular, pain management and orthopedic procedures requiring lateral roll capability.

The innovative, cantilevered table design of the *Aspect100R* significantly enhances mobile C-arm positioning and provides visualization capabilities free from obstructions or artifacts. A unique, center-rib base design allows the operator to stand tableside without having to step on or around casters. Approaches to the table can be made from either side, as well as the head-end, allowing enhanced patient access with little or no need for repositioning.

The *Aspect100R* is designed with an extended base that eliminates the need for heavy ballast for stability and helps protect the tabletop from impacts. Vertical travel capabilities of the *Aspect100R* allow patient placement at a comfortable working height and facilitate its successful integration into a variety of mobile C-arm and fixed-base imaging products.

A variety of table accessories are available for patient positioning and operator radiation protection.

Aspect100R Fluoroscopic Examining Table

FEATURES AND BENEFITS

- Carbon fiber tabletop is 80" in length with 62" imaging area; for most patients, provides total body coverage with minimal need for C-arm repositioning.
- Table width is 22"; provides excellent access for lateral C-arm positioning.
- Lateral roll of $\pm 20^\circ$ allows optimal patient positioning for working ease and quality imaging.
- Motorized elevation with height range of 40.5" to 28.7" is one of the lowest available retracted heights; facilitates patient loading and unloading.
